                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Functional annotation of a full-length mouse cDNA collection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CIDAN Was prepared and sequenced in Mouse Genome Envyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Genomic Sciences Center and Genome Science Laboratory in RIKEN. Genomic Sciences Center and Genome Science Laboratory in RIKEN. Genomic Sciences Center and Genome Science Laboratory in RIKEN. The Propare Mouse tissues. First strand cDNA was primed with a primer prepare mouse tissues. First strand cDNA was primed with a primer prepared by using trehalose thermo-activated reverse transcriptase gardandscandandary variety of the primer adapter of sequence [5] strand cDNA was prepared with the primer adapter of sequence [5] classed with XhoI and SstI. Cloning sites, 5' end: SstI; 3' end:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  FANTOM Consortium.

CDNA Library Arrayed by: The I M.A.G.E. Consortium (LLNL)
DNA Sequencing by: Incyte Genomics, Inc.
Clone distribution: MGC clone distribution information can be
found through the I.M.A.G.E. Consortium/LLNL at: image.llnl.gov
Plate: LLCM800 row: p column: 04
High quality sequence start: 5
High quality sequence stop: 709.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          χX
                                                  The present sequence is the human bcl-w gene encoding Bcl-w protein CC (see AAY05530), a pro-survival member of the Bcl-2 family which is CC widely expressed and which is essential for spermatogenesis. The cinvention relates generally to a method of treatment and to an CC animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility, or CC sequences useful for inducing or reducing fertility, or CC animals. Methods are provided for the treatment of infertility, or CC model carries a mutation is at least one allele of the human or CC murine bcl-w gene or in a gene associated with bcl-w. Such animals CC have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined CC by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise facilitating spermatogenesis in a semination or infertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Spermatogenesis; bcl-3 gene; Bcl-2; human; fertility; infertility; animal model; ss.

                                                                                                                               The mammalian bcl-y genes encode a protein that is a member of the bcl-2 family, components in the cell death pathway. The bcl-2 family have both apoptotic activity and the apoptosis blocking activity. bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. Also, antisense constructs can be used in disorders where prevention of cell death is desired.

The present sequence encodes human bcl-y protein (Hbcl-y). The CC specification also describes rat bcl-y protein (Rbcl-y). Rbcl-y and CC specification also describes rat bcl-y protein (Rbcl-y). Rbcl-y and CC proteins may be used to treat conditions associated with a disruption of CC proteins may be used to treat conditions associated with a disruption of CC used in therapies to treat subjects suffering from: strokes, head trauma, CC ushchmer's Disease, neural and muscular degenerative diseases CC Alzhchmer's Disease, neural and muscular degenerative diseases CC (especially multiple sclerosis), myocardial infarction, vitally induced CC (especially multiple sclerosis), myocardial infarction, vitally induced CC cell death, aging, spinal cord injuries and amyotrophic lateral as a CC sclerosis- conditions where cells under go premature cell death as a CC cresult of triggers which may or may not be apparent. They may also be CC used in this way to develop cell lines which remain viable in culture for an extended period. In contrast, if they act as cell death stimulators, and subjects and seven and bcl-y may be used to treat conditions associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         documentation_block:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence encodes a novel human gene, bcl-w, from the bcl-2 gene family, extracted from an adult brain library. This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's disease, myocardial infarct, muscular degeneration, hypoxia, ischaemia, human immunodeficiency virus infection or in cell transplants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Up-regulation of the gene can also be used to modify cell lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w for therapy, diagnosis, antibody production or screening of potential modulators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 3; Page 48; 86pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Homo sapiens
                                                                                                                                                                                          identification of molecules and genetic sequences useful for identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are inducing or reducing fertility, or for reducing provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bol-w gene a mutation is at least one allele of the human or murine bol-w gene or in a gene associated with bol-w. Such animals have disorganised or in a gene associated with bol-w. Such animals have disorganised or in a gene associated with bol-w. Such animals have disorganised or in a gene associated with bol-w. Such animals have disorganised or in a gene associated with bol-w. Such animals murine bol-w genetic sequences capable of inducing, enhancing or otherwise featility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (HALL-) HALL INST MEDICAL RES WALTER & ELIZA.

The bcl-2 family have both apoptosic activity and the apoptosis blocking activity, bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its

This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's disease, myocardial infarct, muscular degeneration, hypoxia, ischaemia, human immunodeficiency virus infection or in cell iransplants. Up-regulation of the gene can also be used to modify cell lines cultured in vivo, e.g. to develop new lines, to facilitate during genetic modification. It can be used to produce recombinant Bcl-w modulators, diagnosis, antibody production or screening of potential

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl-w gene or in a gene associated with bcl-w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise facilitating spermatogenesis in animals, or which can induce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      bcl-w gene (see AAX25133) and encodes Bcl-w protein (see AAX05533), pro-survival member of the Bcl-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for the identification of molecules and genetic sequences useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 581 BP; 105 A; 164 C; 195 G; 117 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleotide sequence of the cDNA clone Bcl-like (HAICH29).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        20-NOV-1998 (first entry)
                                                                                                                                                                                                                    This is the nucleotide sequence of the cDNA clone Bcl-like (HAICH29), used in the method of the invention. The products of the clone can be used for treating conditions associated with abnormal expression of the polypeptides. They can be used for e.g. treating chronic inflammatory diseases, immunological disorders, autoimmune diseases, inflammatory diseases, various allergies, and as anti-infectious agents. The products can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21-JAN-1997;

                                                                                                                                                                                                                                                                                                                                                                   This sequence represents a nucleic acid molecule designated Gene 120 from the human cDNA clone HGBGZ64 (deposited as clone AFCC 97902 and AFCC 209048) which encodes a secreted human protein. The gene can be used to generate fusion proteins by linking to the gene to a human compared to the gene to a human compared to the fused protein as compared to the human protein only.

The invention relates to 186 novel genes and their fragments (nucleic conditions es: AAV59511-v99812; amino acid sequences AAW74731-W75026) conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polynucleotides. Specific uses are described for each of the 186 to plynucleotides, based on which tissues they are most highly expressed in
                                                                                                                                                                    Align seg 1/1 to: AAV59630

```

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid

macular degeneration, arteriosclerosis,

Claim 1; SEQ ID NO 201;

The sequence represents the coding sequence of Bcl-Xl-DTR apoptosis-
CC modifying fusion protein comprising human Bcl-Xl sequence fused via a
CC short linker to diphtheria toxin receptor binding domain (DTR). The
CC functional apoptosis modifying fusion protein is capable of binding a
CC target cell and integrating into or crossing a cellular membrane of the
CC target cell. The apoptosis-modifying fusion protein comprises at least
CC two domains: the DTR domain, which targets the fusion protein to the
CC carget cell and the Bcl-XL domain, which modifies an apoptotic response
CC of the target cell. The fusion protein is useful for modifying
CC target cell and the Bcl-XL domain, which modifies an apoptotic response
CC of the target cell. The fusion protein is useful for modifying
CC target cell and the Bcl-XL domain, which modifies an apoptotic response
CC of the target cell. The fusion protein is useful for reducing
CC inhibiting or enhancing) apoptosis in a target cell, such as neuron,
CC lymphocyte, cancer, neoplasm, macrophage, epithelial, stem, tumour or
CC hyper-proliferative cell or an adipocyte. It is also useful for reducing
CC apoptosis in a subject after transient ischaemic neuronal injury,
CC especially spinal cord injury. The fusion protein may be used to treat
CC apoptosis in a subject after transient ischaemic neuronal injury,
CC especially spinal cord injury. The fusion protein may be used to treat
CC various diseases and injury conditions through inhibition or enhancement
CC such as Alzheimer's disease, Huntington's disease, spinal muscular
CC atrophy, stroke episodes and unregulated cell growth as in tumours and
CC atrophy, stroke episodes and unregulated cell growth as in tumours and
CC effectively throughout the body and targeted to selective tissue and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  in the method of the invention. The method allows detection of interactions between a protein X and a protein Y which has a reporter function in eukaryotic cells, and comprises modifying the localization patterns of X and/or Y, and the localization of Y in the cell is observed using the reporter function. This method is useful for the elucidation of protein networks within the cell. It is also applicable for the discovery of new proteins and low-molecular drugs, by observing their effect on intracellular protein interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Detection of protein-protein interactions for screening compounds capable of modifying the interaction comprises observing intracellular localization of one protein after altering the modification pattern
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WO200168885-A1
